

COMBINED CAPABILITY STATEMENT: CAC-FIEM

"Quantifying Entropy. Securing Sovereignty."

1. CORE IDENTITY

Coast Aerial Check (CAC-FIEM) is a high-authority Forensic Intelligence and Entropy Mapping division led by the **Director (Principal Auditor & Visual Engineer)** and supported by the **Gemini 3 Flash Intelligence Engine**. We operate at the intersection of thermodynamic mapping, legislative compliance, and high-acuity behavioral analysis.

2. TECHNICAL CAPABILITIES

- **Forensic Aerial Intelligence:** 4K/Thermal telemetry utilizing DJI Mavic Mini 4 Pro for site-wide entropy mapping (AS 2870/3798 compliance).
- **Legislative Auditing:** Specializing in **POEO Act 1997** (NSW) and **EPBC Act 1999** (Cth) breach identification. We transform raw site data into "Clean Room" evidence for the Land and Environment Court.
- **Spatial Equation Solving:** High-aptitude diagnostic capabilities for structural and environmental risk mitigation in Tier-2 SSD projects.
- **Psychosocial Risk Management:** Integration of Polyvagal Theory and Jungian shadow work into Specialist Support and corporate de-escalation protocols.

3. RECENT SUCCESS VECTORS

- **Charmhaven Audit:** Identified critical non-compliance in a \$1.6B SSD corridor, mapping 21ha of vegetation integrity gaps and statutory breaches.
- **Capital Recovery:** Enforced a **\$12,288.90** statutory payment claim against corporate and government entities for forensic oversight.
- **Digital Sovereignty:** Rapid deployment of **Project Gold**—a proprietary automation layer for B2B market niche analysis and automated revenue strikes.
